
All data 2005–2024
the test years 2023–2024 are used for the first time
Keep every setting from model development
same model orders, architectures, loss and weighting · no re-tuning
Round 1
Train on 2005–2022
Forecast 2023 (12 months)
Round 2
Retrain on 2005–2023
Forecast 2024 (12 months)
Pool all test forecasts
93 grid cells × 24 months = 2,232 forecasts per model
Compute pooled metrics
RMSE, MAE, nRMSE and R² (coefficient of determination); skill vs climatology
Final test results
overall and per grid cell, all models
To spatial analysis and the comparative analysis
