
RMSE of the proposed model minus each benchmark, per grid cell, 2015–2024
(a) vs SARIMAX
Lower RMSE in 74/93 · significant in 12
(b) vs LSTM
Lower RMSE in 73/93 · significant in 6
(c) vs XGBoost
Lower RMSE in 80/93 · significant in 4
(d) vs Climatology
Lower RMSE in 67/93 · significant in 5
(e) vs Seasonal naive
Lower RMSE in 93/93 · significant in 81

How to read
ΔRMSE = RMSE of the proposed model minus RMSE of the benchmark, over the 120 months of each grid cell
−0.08
−0.04
0
0.04
0.08
ΔRMSE (kWh/m²/day)
← proposed better
benchmark better →
Significant difference (DM-HLN, FDR q < 0.05)
Differences below −0.08 take the darkest blue (seasonal naive).
